TECHNICAL SKILLS

Languages: JavaScript | HTML/CSS | Python | C | C++ | Java | Lua/Luau

Framework/Libraries: TensorFlow.js | Discord.py | BeautifulSoup | p5.js | Pandas

Tools: Git | GitHub | Roblox Studio | Android Studio | PyCharm | Visual Studio Code

EDUCATION

University of Central Florida | Bachelor of Science in Mathematics, Minor in Computer Science

Orlando, FL

Relevant coursework: Data Structures and Algorithms, Object-Oriented Programming, Software Engineering, Mobile App Development

Expected 2026

WORK EXPERIENCE

Lead Teaching Assistant

Summer 2025

Girls Who Code

- Led a team of 4-5 Teaching Assistants to ensure consistency and alignment across instructional materials, lesson plans, and classroom expectations
- Identified and addressed gaps in instructional delivery across classrooms, implementing shared resources to improve teaching consistency
- Resolved day-to-day instructional and logistical challenges by acting as the primary liaison between TAs, program leadership, and corporate partners (Morgan Stanley, Stellantis)

Teaching Assistant

Summer 2024

Girls Who Code

- Served as a Teaching Assistant for an international programming course of 60+ students
- Taught core coding concepts (loops, functions, conditionals) to beginner students using JavaScript and p5.js, translating abstract logic into interactive visual projects
- Improved student code quality across 40+ assignments by debugging and mentoring one-on-one
- Coordinated with representatives from partners (News Corp, Cox Enterprises) to plan class material and coursework

PROJECTS

Roblox Game: Bike Obby | Lua

- Developed a multiplayer obstacle course game with custom bike mechanics, physics-based gameplay, checkpoints, and persistent player progression
- Designed persistent player-data and inventory systems using ProfileService and Roblox DataStores

TFT Leaderboard Discord Bot | Python

- Developed a Python Discord bot using discord.py, Riot Games API, Requests, and BeautifulSoup (BS4) to scrape, retrieve, and process player data
- Integrated Riot player data into a dynamic leaderboard with asynchronous Discord commands

Pomodoro Pal | HTML, CSS, JavaScript

- Built a user-friendly pomodoro timer website to promote productivity and reduce distractions
- Implemented webcam phone detection using a trained COCO-SSD model from TensorFlow.js

Cloud9 x JetBrains Hackathon | HTML, CSS, JavaScript

- Developed an interactive esports event minigame using JavaScript, implementing game mechanics, user interactions, and responsive web components for live LCS/VCT events
